Aerial Lift Training Calgary

Aerial Lift Training Calgary - An aerial work platform is a mechanical access platform. This particular device provides access to otherwise inaccessible places for people or equipment. Also known as an aerial device or elevating work platform, the device is normally utilized to be able to access high places. Construction and maintenance workers normally need to use aerial work platforms on the job. Firefighters use them for emergency access.

The aerial work platform is designed to temporary use, providing access to high places. They are intended to be operated by one person, with the capability of lifting weights of not more than one ton. Various kinds have load limits that are higher. There are a variety of kinds of aerial work platforms; like for instance, there is a "scissor lift" and a "cherry picker".

Many of the aerial work platforms are outfitted with compressed air connectors for power tools and electrical outlets. For specialist jobs, such as lifting frames for window glass, an aerial work platform can come along with special equipment.

People who would like to operate an aerial lift device need to go through training. Normally, the members of a Health & Safety Committee and their representatives are responsible for the inspection of each equipment and work areas and are likewise required to undergo training. Trainees would know aerial lifting device operation. They would also know the rules which apply to the safe use of these machines. Rules vary within different provinces, and in worksites which are federally regulated.

Anyone who is needed to be lifted by or work near an aerial lifting machinery has to be informed concerning potential dangers. An Aerial Lift Training Video could be shown in a general safety session to educate all of the workers who are lifted by them or work near them.

Aerial Lift Training Program includes modules focused on the following: Hazard Identification; Aerial Lift Devices and Operating Controls; Pre Operational Checks for Aerial Lift Devices; and Platform Positioning & Park Positioning. The program is meant to train workers on safely utilizing boom-supported, self-propelled elevated work platform and self-propelled, elevated work platform. A certificate would be provided to employees who finish the program, signed by somebody qualified to verify the successful completion of a hands-on practical exam.
