Manlift Ticket Calgary

Manlift Ticket Calgary - The Manlifts and Elevated Platforms course provides training on the rules, regulations and proper application of safe operating procedures and work practices included in daily activities for those who work using this machine. The program has been designed for people who are actively involved in these activities or those who have a basic knowledge of this machine.

manlifts and aerial platforms have become common and integral machinery in industrial settings during the past few decades. These machines provide an easy way to lift staff near what should be done on a stable platform apparatus, allowing workers to carry out tasks with greater comfort and safety rather than being perched on top of ladders or scaffoldings.

Like every other device, manlifts are only safe when they are utilized correctly. Since they lift staff above floor or ground level, accidents could easily take place and this may result in serious fatalities or injuries for both the manlift operators and any passerby who might be unlucky enough to be standing beneath.

There are a variety of models of manlifts. Most fall into 1 of 2 categories: the articulating boom lift, that has the capability of both vertical and horizontal movement and the scissors lift, that is capable of moving up and down.
