## Scissor Lift Operator Certification Calgary

Scissor Lift Operator Certification Calgary - North American regulators recommend that workplaces require operators of scissor lifts, booms or aerial work platforms to acquire certification training. Scissor lift operator certification is not mandatory, but there are advantages to making sure that this training is offered to all the operators.

To be able to enable personnel to reach high levels, the scissor lift is a work platform made with a pantograph, which is a connected, folding support which shaped in an 'X' pattern. Upward movement takes place when pressure is applied to the outside of the lowest set of supports, propelling the work platform vertically by lengthening the 'X' pattern. A bridge extends from some platforms in order to allow convenient access to the work area.

With the release of the manual valve, the platform can descend to the ground. The decsension is carried out by the simple release of hydraulic or pneumatic pressure. This is the main reason that scissor lifts are the machine of choice at worksites.

Operators that are both experienced or inexperienced will be able to get some benefit from right scissor lift training. A scissor lift operator certification program could be particularly designed to accommodate for those lifts utilized at your workplace. The trainees' certificate of training will list the models on which they trained.

The classroom instruction comprises the following topics: introduction to scissor lift training; authorization, attitude and rules and guidelines; Occupational Health safety; safety rules and common dangers; workbook and record of training (ROT)

The in-class session will end with a written exam.

Practical hands-on training includes instruction on the following: pre-operational inspection; safety equipment;; function test checklist; operators manual; regular maintenance and the practical session will end with a proficiency demonstration.
