

## Aerial Lift Train the Trainer Calgary

Aerial Lift Train the Trainer Calgary - The Aerial Lifts Train the Trainer Certification Program would teach trainers how to effectively train operators in safe industrial mobile machine operation. Trainers are provided with in-depth instruction about aerial lift equipment. The program is provided on an open enrollment basis and delivered at selected training sites. Prior to certification, trainers are assessed and scored based on their demonstrated skills and knowledge.

The Aerial Lifts Train the Trainer Certification Program focuses on practical learning and as the best training provider within the industry, we provide top notch hands-on training. We provide lots of opportunities to practice the techniques and concepts that are taught in the classroom. Along with hands-on experience, trainers develop general knowledge of machinery theory and instructional methods, classroom and field communication skills, and ability to successfully train and evaluate operators. Trainers would gain an understanding of what traits make a successful trainer.

The Aerial Lift Train the Trainer Certification Program teaches the instructional methods involved in communicating concepts within a classroom and/or field situation. Knowledge needs a training part to be efficient in workplace environments. There are three factors of machinery operation that the trainer should learn how to convey to operators: what to carry out; how to do it; and the reason why it has to be done.

The program offers detailed, up-to-date reference material to help trainers convey the subject matter to machine operators. Manuals contain detailed information about all aspects of industrial mobile equipment operator training. Included within the package are training aids which provide a visual reference so as to improve the learning experience. The equipment-specific training products include important materials meant for both the operator and the trainer: videos/DVD's, overhead transparencies, safety message posters, kinds of equipment; stability pyramids and digital training aids.
